Dockerizing Apache with Custom HTML

Short

Task Overview

Set up a Docker container run Apache

Apache should serve a custom HTML file

Dockerfile Setup

```
FROM ubuntu:latest

RUN apt-get update && apt-get install -y apache2

COPY sample.html /var/www/html/index.html

EXPOSE 80

ENTRYPOINT ["apachectl", "-D", "FOREGROUND"]

~
```

Running the Docker Container

```
#docker build -t ubuntu_apache .

#docker run -d -p 81:80 --name myapache ubuntu_apache
```

http://localhost:81/

Hello World
